Gelding: a male horse that has been neutered and can not have offspring.

# Fun Facts

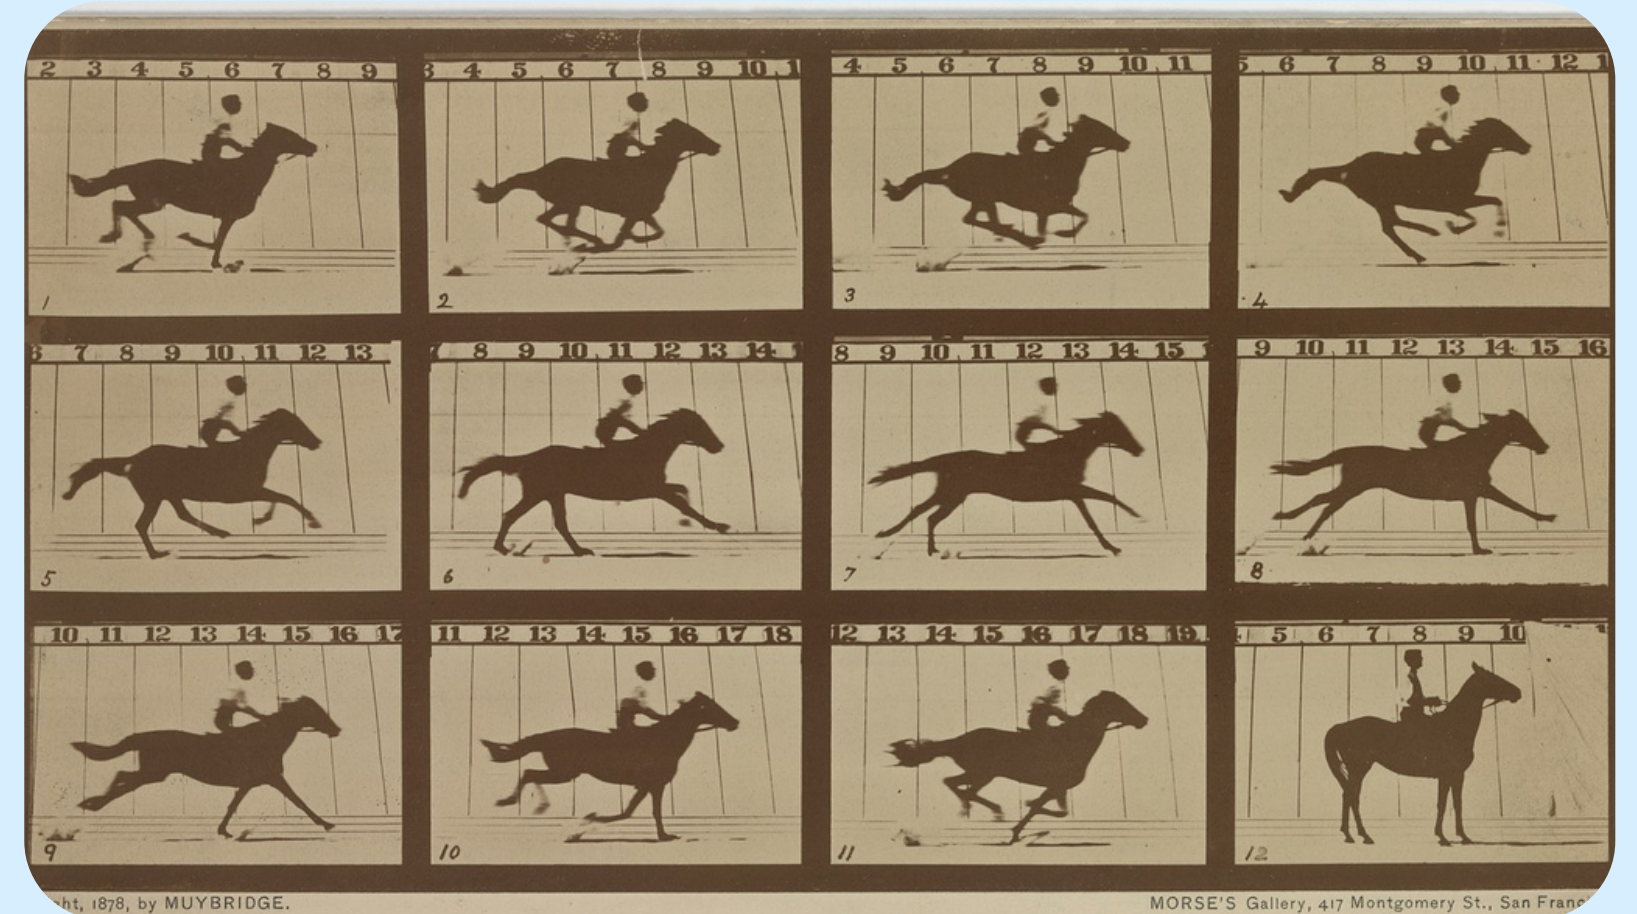

## Horses are measured in hands

Horses are measured in hands because it was originally the standard unit of measurement during the Middle Ages. One "hand" is equal to 4 inches, which is the approximate span between a human's thumb and outstretched fingers

# Horse History

## "The Horse in Motion"

### Historical Fact:

The Horse in Motion is a series of cabinet cards by Eadweard Muybridge, including six cards that each show a sequential series of six to twelve "automatic electro-photographs" depicting the movement of a horse. This was the first motion picture where a Black Jockey named Gilbert Domm is captured riding a horse.

# Horse Safety

wait for an experienced rider to help you before going behind horses

Horses have a blind spot directly behind them, so when you cross from one side to the other you will be out of their line of sight for a moment. When they lose sight of you as you cross behind them, then enter back into their field of vision, it can cause them to startle.

# Feeding A Horse

When feeding horses hold your hand out flat.

Doing this will keep your fingertips away from the horse's mouth, and it will be less likely to accidentally nip you while taking the food.

Try holding your hand how it is in the photo above!

# Riding styles

## Equine Education

### ENGLISH

**Show  
Jumping**

**Dressage**

### WESTERN

**Barrel  
Racing**

**Roping**

English and Western are the two common horseback riding styles, though they are very different from one another. While English riding includes showmanship competitions, such as hunter jumping and dressage, Western riding includes barrel racing, roping and rodeo-style competitions.

Here at Kiddy Up With Horses we use the Western Method of Horseback Riding
